Chapter 5

PL/SQL Tutorial

Cursors

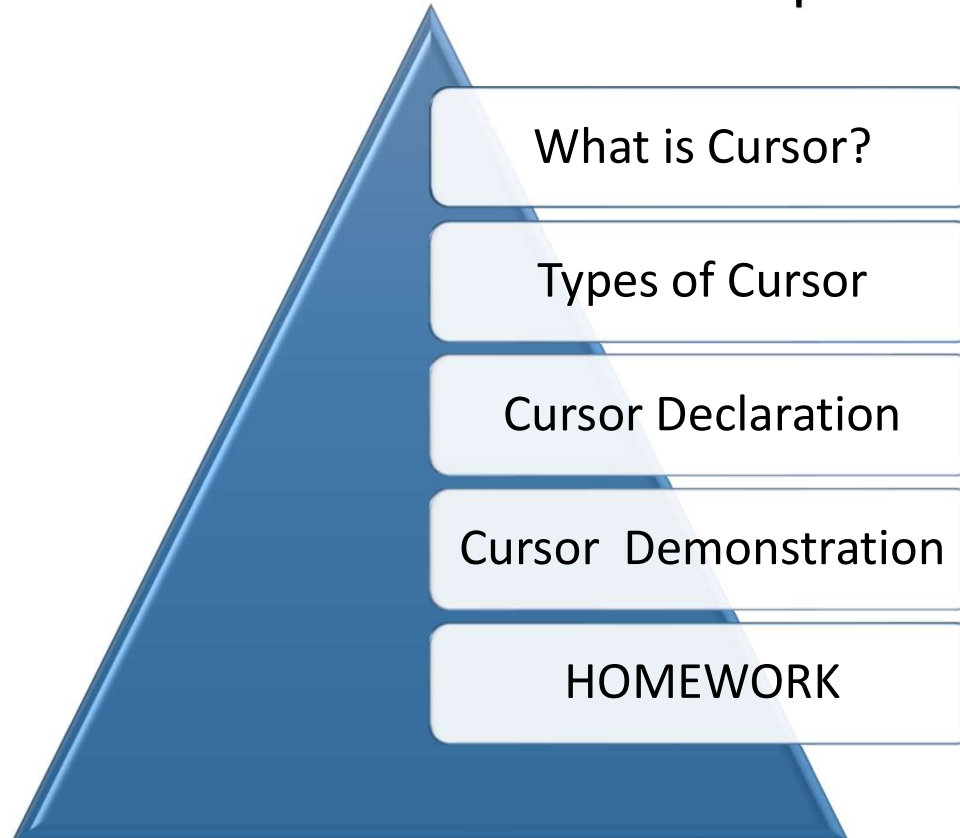

Let's make coding fun!

Java
ORACLE

What do we learn in this Chapter?

What is Cursors?

Oracle engine uses work area for its internal processing in order to execute an SQL statements. This work area is private to SQL operations called **CURSORS**. Data stored in Cursor called **Active Data set**

CURSOR

TABLEA

COLA

COLB

ROW11

12

ROW21

10

CURSOR
C1

CURSOR
C1

CURSOR
C1

ORACLE ENGINE MEMORY SPACE

TYPES OF CURSOR

Implicit

Explicit

- Automatically created by Oracle Engine and managed by Oracle engine internally
- Attributes of this cursor can be used to access information about the status of last SQL statement execution
- Defined by developer to get more control over context area.
- Attributes helps to access active data set and program accordingly

EXPLICIT CURSOR Management

Declare

- Declare a cursor for initializing memory

Open

- Opening Cursor for allocating memory

Fetch

- Fetching cursor for retrieving data
- Moves data held in active data set into memory variables

Close

- Closing the cursor to release the allocating memory

FETCH PROCESSING

Cursor row moves to
fetch encountered

Client PL/SQL
block of code
defined Cursor

FETCH
defined

Server Machine
user data
stored on HDD

TABLE

Current record
is fetched into
PLSQL Variables

FETCH
Issued

Active dataset
on Server RAM

CURSOR SYNTAX

```
DECLARE  
CURSOR <cursor_name>  
BEGIN  
OPEN cursor_name;  
FETCH cursor_name into  
variables;  
CLOSE cursor_name;  
End;
```

ATTRIBUTES	DETAILS
%FOUND	Last fetch success
%NOTFOUND	Last fetch failed
%ISOPEN	Explicit cursor is open
%ROWCOUNT	Returns number of rows fetched from active set

Cursors Demonstration

```
SQL> declare
  2  col_a tablea.col_a%type;
  3  col_b tablea.col_b%type;
  4  cursor c_tablea is select col_a, col_b from tablea;
  5  begin
  6  open c_tablea;
  7  loop
  8  fetch c_tablea into col_a, col_b;
  9  exit when c_tablea%notfound;
 10  dbms_output.put_line(col_a||' ' ||col_b);
 11  end loop;
 12  close c_tablea;
 13  end;
 14  /
```

Table A

COLA	COLB
ROW11	20
ROW21	12

Practice Project

INVENTORY MANAGEMENT

PRODUCT_ID	DETAILS	PRICE	STOCK_STATUS
IT001	Iron rod	121	OUT
IT002	Steel Bolts	111	IN
IT003	Washer Tar	231	IN
IT004	Foam	112	OUT

HOME WORK!

Instructions

1. Create a cursor to retrieve active data set which is not in stock and add an event using trigger to alert for out of stock to the manager.
